

# Portfolio Website

## Nathan Blaga

# Purpose

The ambition behind this project is to fulfil the following:

- Create a portfolio website that will be used to demonstrate my capabilities and skill set to future employers.
- Begin developing my own style and branding as a developer.

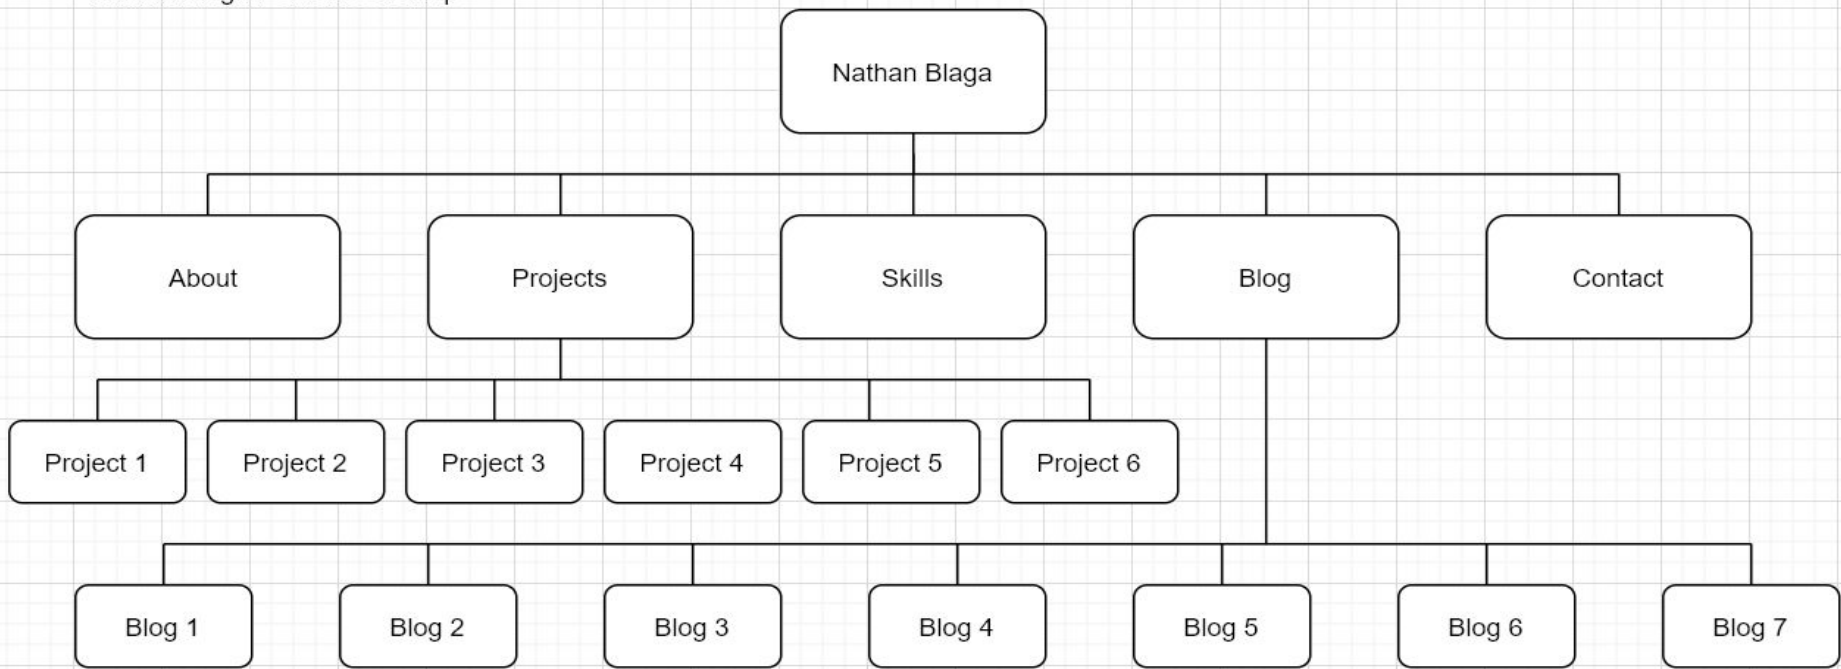

# Structure & Navigation

Simplistic tree structure:

- All pages are interlinked with each other.
- Mobile and tablet view follows the same navigation and structure as the desktop view.
- Mobile interface uses the 'burger' icon alongside a drop down menu for a more phone-friendly experience and interaction.

# Design

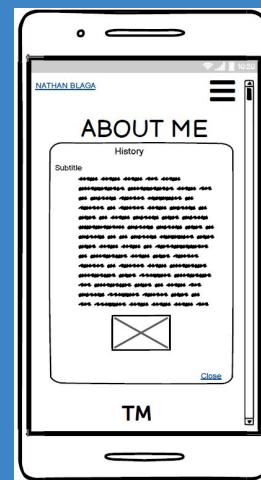

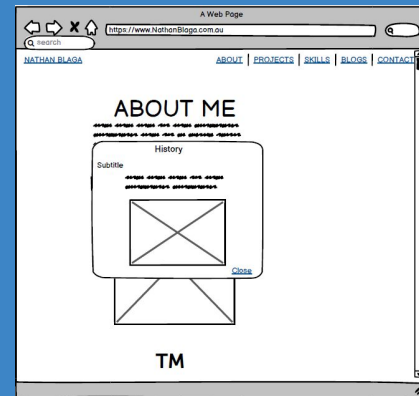

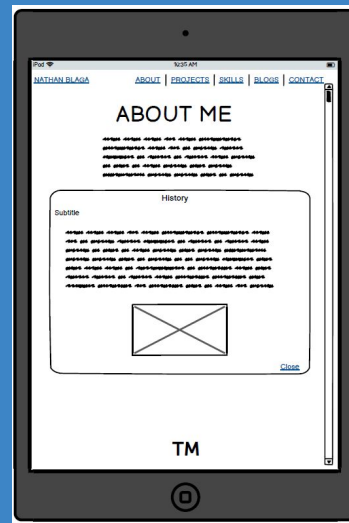

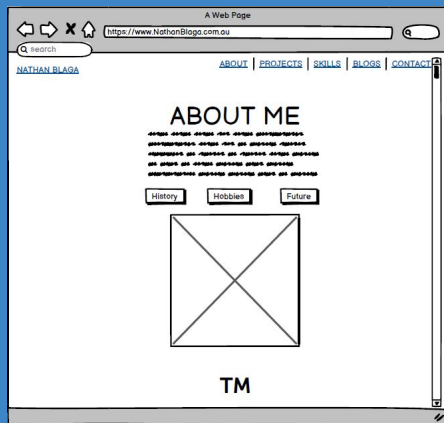

- I wanted the website to be vibrant and colourful.
- Although the different pages of my website have their own unique feel and look, they all follow the same cohesive design and pattern.
- The goal was for a sleek design and look, simple yet appealing, without being overcrowded with images, text and conflicting elements.
- Desktop, tablet and mobile platforms all have the same design layout.

# Components

- My portfolio website utilises the following:
  - HTML
    - Flexbox
    - Sleek navbar with 'burger icon' in mobile platform.
  - CSS
    - Colourful gradient background
    - Transform/transition properties
    - Sleek and colourful styling of text, images, icons and links.
  - JavaScript
    - Popup box

# Review

## Challenges:

- Working within my current skill limitations and knowledge of coding.
- Inexperience with mobile first design and coordinating my vision and design on different platforms.

## Ethical Issues:

- Copyright and sticking to my own original design.
- Making sure the website was not offensive in any manner.
- Ensuring that the website delivered on its original purpose.
- Creating a website and experience that was accessible to various users.

# Review

## Favourite Parts:

- The entire project was very fun and engaging.
- Becoming aware of and understanding my current limitations.
- Developing a more richer understanding of the following.
- HTML.
- CSS.
- Basic level JavaScript.
- The deployment of a website.
- Git and GitHub repos.
- The documentation process of undertaking a project.
- Problem solving and spending hours working out how something does or does not function correctly.
